Etapas da Formação da Planície Costeira do Rio Doce

Degredo

An aerial photograph of a vast, flat landscape under a cloudy sky. The terrain is a mix of green and brown, with several large, interconnected bodies of water. The water is a dark, muted blue-grey color. The land is mostly flat, with some darker patches that could be shadows or different types of vegetation. In the distance, the horizon is visible under a heavy, overcast sky. The overall scene is a wide, open natural area.

DUNAS

DUNAS

Formações de areia, localizadas nas regiões costeiras

Importantes na FIXAÇÃO da costa, PROTEGENDO as regiões interiores dos ventos e tempestades marinhas.

Na região, as dunas formadas durante a última regressão marinha formaram cordões litorâneos, cobertos por Matas de Restinga.

DUNAS FIXAS

An aerial photograph showing a long, narrow strip of golden sand dunes along a coastline. The dunes are separated from the dark green forested land to the left by a thin line of vegetation. The ocean is visible on the right, with white surf breaking against the shore. The text "DUNAS MÓVEIS" is overlaid in white capital letters in the center-left of the image.
